|www.linkedin.com/in/khursheed-abbas-mirza-7b0715260

WORK EXPERIENCE

IIDT Blackbucks

May 2024 -July 2024

MERN Stack Developer Intern

- Created web applications using React.js, Node.js, and Express.js as a part of the MERN stack during a 2-month internship, leveraging React Hooks and state management.
- Developed an Email Validator to check email validity with real-time feedback and applied react-router for navigation between pages.
- Utilized efficient API data fetching to populate the user interface, enhancing skills in full-stack development and UI optimization, and deployed the project on GitHub Pages.

EDUCATION

Krishna University, Machilipatnam.

Expected Graduation: July 2025

Bachelor of Technology (B.tech) in computer science and Engineering

PROJECTS

Online Restaurant Booking

Dec 25, 2024 – Jan. 2, 2025

- Build a web application using React and Next.js, enabling users to book restaurant tables remotely by inputting details (name, phone, date, time) and checking available time slots, with React Router for seamless navigation.
- Implemented state management using Context API and Redux, integrated real-time booking confirmation, cancellation features, and user authentication, optimising performance with React Hooks (useState, useEffect, useContext).
- Fetches and displays data from APIs to populate the user interface efficiently, utilizing Express.js for the back end and IBM Cloudant Database for data storage, deployed on Vercel (front-end) & backend (Netlify) for scalability.
- Technologies Used:** React, Next.js, Express.js, IBM Cloudant Database, Tailwind CSS,
- Delivered a live, functional booking system (frontrest.vercel.app) to simplify restaurant reservations.

Weather Application

Sep 8, 2024 - Sep 18, 2024

- Developed a web-based weather application displaying current climatic conditions and a 10-day forecast, with Machilipatnam as the default location and an option to search other cities, using React Hooks (useState, useEffect) for state and data management.
- Utilized React Router for browser-based navigation and Bootstrap for a responsive, intuitive interface, fetching real-time weather data from an API to populate the UI efficiently.
- Focused on component optimisation and performance using functional components, enhancing user experience with a clean, responsive design. **Technologies used** :React, Bootstrap, HTML, CSS
- Outcome:** Deployed a live weather forecasting tool (khursheed-abbas-mirza.github.io/rweather/) to provide users with accurate climate updates, improving load times with efficient React practices.

CERTIFICATIONS

Developing Front-end apps with React |edX (IBM)

July 2024

- Mastered fundamentals of React development, including React Router for navigation and advanced state management with Context API and Redux.
- Gained proficiency in efficient use of hooks (useState, useEffect, useContext) to build dynamic, responsive front-end

Back-end Application Development with Node.js and Express |edX (IBM)

Aug 2024

- Learned back-end routing, session management, and token-based authentication using Node.js and Express.js to create secure, scalable APIs.
- Developed skills in integrating back-end services with front-end applications, enhancing full-stack development capabilities.

SKILLS

- Languages: Python, Java, JavaScript.
- Frameworks: React.js, Express.js, Next.js, Flask, TailwindCSS
- Databases/Tools & Technologies: MySQL, MongoDB, IBM Cloudant, Git, GitHub, Postman, Eclipse, Vercel, Netlify.
